

FOR IMMEDIATE RELEASE

The Physical Security Interoperability Alliance welcomes Cyber Group as new member

Company plans to implement PSIA specification in second half of 2009

SANTA CLARA, Calif., Sept. 21, 2009— The Physical Security Interoperability Alliance (www.psialliance.org), a global consortium of physical security providers focused on promoting interoperability of IP-enabled devices in the security industry, is pleased to announce that Cyber Group has joined the organization.

Cyber Group joins nearly 50 member companies that work in conjunction to promote the interoperability of IP-enabled security devices across every sector of the industry including video surveillance, access control, storage and recording devices. PSIA is driven by its members to promote interoperability through the development of standards and specifications that when widely adopted will reduce development costs for manufacturers, lead to ease of installation for systems integrators and enable end users to choose a best-in-breed solution regardless of brand.

“Many of our customers and prospects have been slow in making the transition to IP because of the compatibility issue. Our customers are demanding compatibility,” said Bhopi Dhall, CEO of Cyber Group. “Our compliance with PSIA's specification in 2009 will accelerate the adoption of our technology in the physical security marketplace as we don't have to wait to have a unique driver developed for each software platform to work with the CyGOS system.”

PSIA's 1.0 API Media Device specification, which has been reviewed by technical experts that represent all segments of the IP security market, enables interoperability between disparate products, expanding opportunities for companies that provide solutions to the physical security marketplace. The 1.0 specification is available free of charge and can be viewed at

www.psialliance.org.

About PSIA

The Physical Security Interoperability Alliance is a global consortium of nearly 50 physical security manufacturers and integrators that are focused on promoting interoperability of IP-enabled security devices across every segment of the security industry.

About Cyber Group Inc.

Cyber Group is a global company that develops software, electronic products and systems solutions for a wide range of public safety, energy, business and government applications. The company was founded in 1998, has more than 50 engineers on staff and is based in Dallas.

CyGOS is a concealed security system that works where standalone cameras, cables and wireless will not. Cyber Group is a certified Woman/Minority-owned corporation and a Microsoft registered partner. For more information about Cyber Group, visit www.cybergroupusa.com.
