### **ENCORE Demonstration of Unique CyGOS™ Security Modules Designed for Difficult to Monitor Locations at the TPCA Annual Conference**

**(DALLAS, TEXAS – MARCH 30, 2010)** - Cyber Group, Inc., a global provider of engineering solutions, announced today that it will be demonstrating its **patent pending** CyGOS Security Modules at The Texas Police Chiefs Association Annual Conference (March 31-April 1) in Addison, Texas. This conference immediately follows the very successful demonstration of CyGOS at The International Security Conference (ISC West) in Las Vegas.

Cyber Group, Inc. is a Milestone Systems, Inc. Solutions Partner and CyGOS was featured at the Milestone Solutions Center Showcase at ISC West. Milestone Systems, Inc. Distribution Manager - Americas, Reinier Tuinzing extended a personal invitation for Cyber Group to demonstrate with them at ISC West stating,

*"There are 3 reasons Milestone would like CyGOS featured in our Center Showcase, You're not just another camera, Running Ethernet over the installed power for industrial environments (not to be confused with Power Over Ethernet) is a unique and innovative solution, and CyGOS is PSIA enabled"*

Cyber Group is also a member of the Physical Security Interoperability Alliance (PSIA) and CyGOS Security Modules were also featured in PSIA's Technology Demonstration at ISC West.

"Today, with all the video/audio surveillance technology available, we found there are still locations like prison cells, psychiatric wards, suicide watch rooms, nurseries, parking garages and others that need monitoring, but installation is difficult due to physical infrastructure constraints and wireless solutions do not effectively work. However, these locations all have light fixtures and AC power lines," said Bhopi Dhall, Founder and CEO of Cyber Group. "Our vision was to create a reliable solution that exploits the existing electrical infrastructures."

"Integrators and VARs are the backbone of the IP surveillance market. Video and audio surveillance users rely on them to provide end-to-end solutions. CyGOS will help them better enable their customers to see and hear in places they currently cannot," said Tom Hulsey, Director of Field Operations for Cyber Group. "And, at the same time CyGOS provides them with an incremental revenue opportunity."

### **ABOUT CYBER GROUP, INC.**

Founded by former senior level engineers from Texas Instruments Defense Systems and Electronics Group, in 1998, Cyber Group has developed electronic hardware and software solutions for industrial automation, public safety, and energy management. Today, with more than 50 engineers, Cyber Group has one of the best software and hardware engineering teams in the world and the company is certified by the Texas Board of Professional Engineers. Cyber Group is a certified woman owned business enterprise and registered in the North Texas Regional Certification Agency.
